### Describe the present and original (if known) physical appearance

The Kirkwood Missouri Pacific Depot is a one-and-one-half story edifice of random ashlar construction with a second-story circular tower, a picturesque roofline, and wide, flared overhanging eaves. In the center of the north (primary) facade is a portecochere with a gabled hip roof supported by square stone pillars. On the south side, facing the railroad tracks, a semicircular bay window permits an unobstructed view of the tracks in both directions. The bay window projects through the roof to form the tower, or dormer. This frame dormer is sided with shingles and has a flared conical roof capped with an ornamental finial.

In style, the building eloquently expresses the picturesque eclecticism defined by Carroll Meeks in his important study entitled The Railroad Station (New Haven, 1956). Built in 1893, the Kirkwood Missouri Pacific Depot possesses qualities common to several popular styles of the last third of the nineteenth century. Elements of the Queen Anne style include the high multiple roofs and the round tower, or turret. From the popular Richardsonian Romanesque come the round arch surrounding the north door and the heavy stone masonry construction. In many ways, however, the building more accurately reflects the shingle style, with its use of shingles on the second-story dormer, ground-story use of stone, and multiple intersecting roofs. There is also a classical aspect in the symmetrical placement of windows and doors.

The original plans and drawings for the building, still in the possession of the railroad company, contain no architect's signature, possibly indicating that the design was formulated by the company's own staff. Contractor Douglas Donovan constructed the building in 1893. He was forced to sink caissons deep into the soft, swampy ground in order to anchor the structure.

The original drawings indicate that the steep roof was covered with decorative metal shingles and capped with ornamental metal ridge tile. The lower end where the curved roof projected out to provide deep overhanging eaves was covered with a "tin roof". On the south side along the tracks, the eaves extended to Kirkwood Road (then known as Webster Avenue) forming a wide canopy for the comfort of the passengers.

Historic Preservation

**Specific dates** 1893, 1941

**Builder/Architect** Douglas Donovan, Builder

### Statement of Significance (in one paragraph)

The Kirkwood Missouri Pacific Depot is significant under Criteria A and C, to wit: it is associated with important changes in American society resulting from the expansion of railroads and the development of suburban bedroom communities in the late nineteenth century; it is an outstanding example of picturesque eclecticism in the design of a small-scale public building in the final decade of the nineteenth century. Alterations made in 1941 are exceptionally significant in that the quality and extent of the alterations were affected by the will of local citizens interested in preserving the historical character of a local landmark.

### Architecture

The Kirkwood Depot dates from the early 1890's, a period of great achievements in the design and construction of railroad terminals, including Theodore Link's monumental Union Station in St. Louis, just fifteen miles away. With this enormous terminal, the Kirkwood Depot shares some elements of the Richardsonian Romanesque style. In contrast with Union Station, however, the depot in Kirkwood is modest, simple, and restrained. Less exuberant and extravagant than the grand station in St. Louis, the Kirkwood Depot is nevertheless a distinguished example of the picturesque public buildings of the period.

### Transportation

Kirkwood exists because of the railroad. One of St. Louis County's first planned suburbs, the town was named for James Pugh Kirkwood, engineer and surveyor for the Pacific Railroad. The first station on the site of the present depot was erected in 1853, the year in which the first locomotive pulled into Collins Depot, the stagecoach stop that was soon renamed Kirkwood. The present depot stands as a symbol of the community's origins as a residential haven for businessmen who rode the train to their offices in St. Louis. Kirkwood remains a regular stop for Amtrak and one of the few American communities to have enjoyed uninterrupted passenger service since 1853.

### Historic Preservation

The depot stands in its present form because of the timely intervention of local citizens who prevented a drastic alteration and "modernization" of the building in 1941.

In 1941 the building was remodeled extensively. However, irate citizens managed to thwart plans to drastically modernize the station in order to "conform with contemporary colonial architecture."<sup>1</sup> Plans announced by A. R. Becker, architect for the railroad company, called for removal of the tower and roof projections and sheathing the exterior walls with "asbestos cement clapboards."<sup>2</sup> These plans never materialized. In the 1941 alterations, the extended canopy on the east side was removed, the carriage porche (north facade) was widened to accommodate modern vehicles, two chimneys were removed, and central heating was installed. The present asbestos shingle roof must also have been installed at that time.
